

For long-life and trouble-free culverts, choose...

# WEHOLITE®

- A culvert system

- Profile-wall HDPE pipe
- Available in 5.03m (16.5') and 7.62m (25') laying lengths
- Pipe sizes from 460mm (18") to 3050mm (120") ID
- Conforms to ASTM F894
- Utilized by various DOTs, Municipalities, Cities, Towns and Counties

- Ideal for culverts, especially those:
- With aggressive waters
  - With corrosive soils
  - Where road salts are applied

## Why is Weholite® the right choice for your culverts?

- Corrosion resistant
- Outwears other traditional culvert materials
- Hydraulically efficient (Design Manning 'n' factor of 0.01)
- Smooth "non stick" inner surface preserves the flow capacity for its entire service life
- UV Resistant
- Long service life (50+ years) for lower life-cycle cost
- Installs quickly and easily without requiring the use of special equipment
- Long laying lengths for faster installation
- Lightweight construction for transport efficient loads as well as enabling the use of light-duty lifting equipment
- Allows for fast field length adjustments with standard cutting tools
- Tough and durable permitting installations at sub-zero temperatures and also decreases the likelihood of pipe damage during handling and installation
- Smooth outer wall for easy placement of embedment materials in the haunch zone
- Fully-restrained joints eliminate the joint separations commonly found with other traditional culvert systems

Custom-Built Fish Baffles

## Thread-Loc Joint\*

- Weholite's unique "Thread-Loc" joint enables municipal maintenance crews or contractors to assemble culverts
- Joint assembly is fast and positive

\* Thread-Loc Joint not available in USA for pipe sizes of 1200mm (48") ID and smaller
